ASSIGNMENT-14.4

Roll No:2303a51374

Batch:06

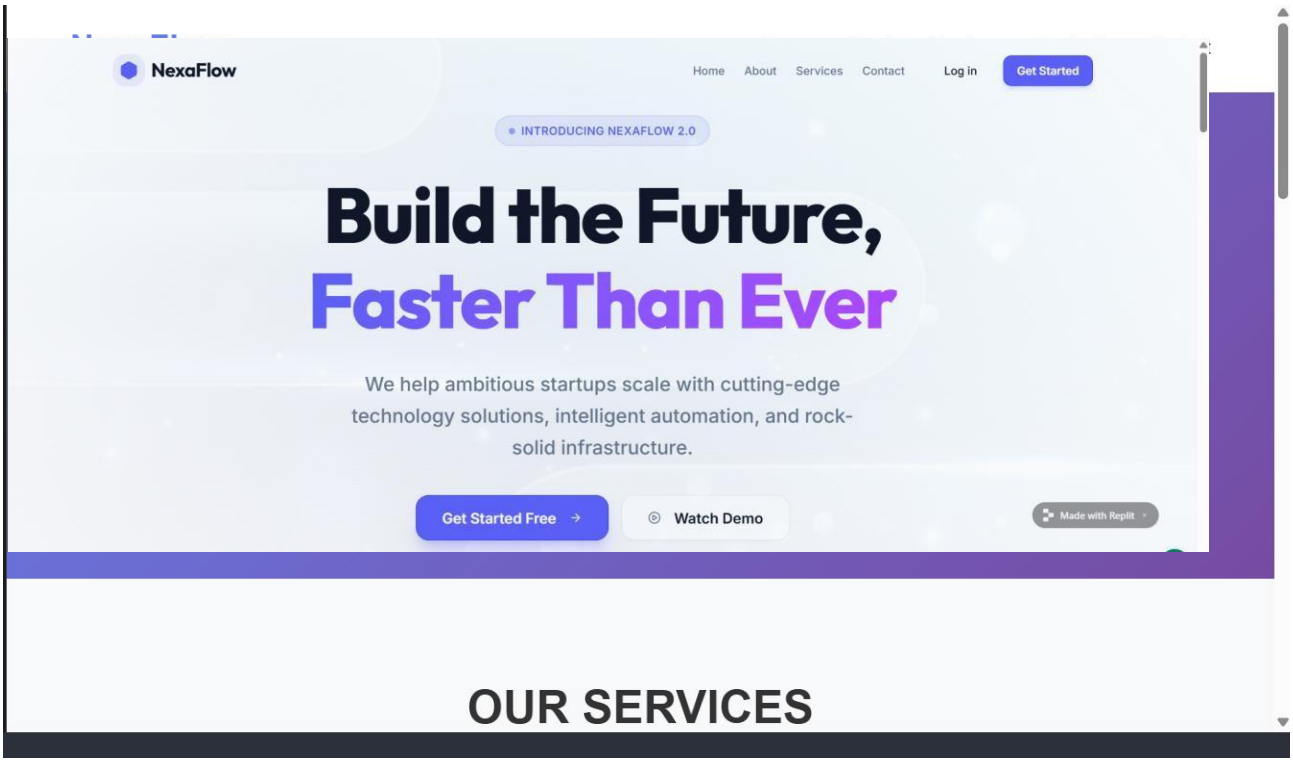
Task 1: Responsive Homepage Layout for a Startup Website

Scenario: You are designing a basic homepage for a startup company that needs to look good on desktops, tablets, and mobile devices.

Prompt:

Create a responsive startup homepage using HTML, CSS, and JavaScript.
The page should include:
- A header with a logo and navigation links (Home, About, Services, Contact)
- A main section with a hero banner and 3 service cards
- A footer with basic company information
Use modern CSS (Flexbox or Grid) and media queries to make the layout responsive for desktop, tablet, and mobile screens.
Add simple styling, hover effects for buttons and links, and ensure the design looks clean and professional.
Provide the complete HTML, CSS, and JavaScript code.

Output:



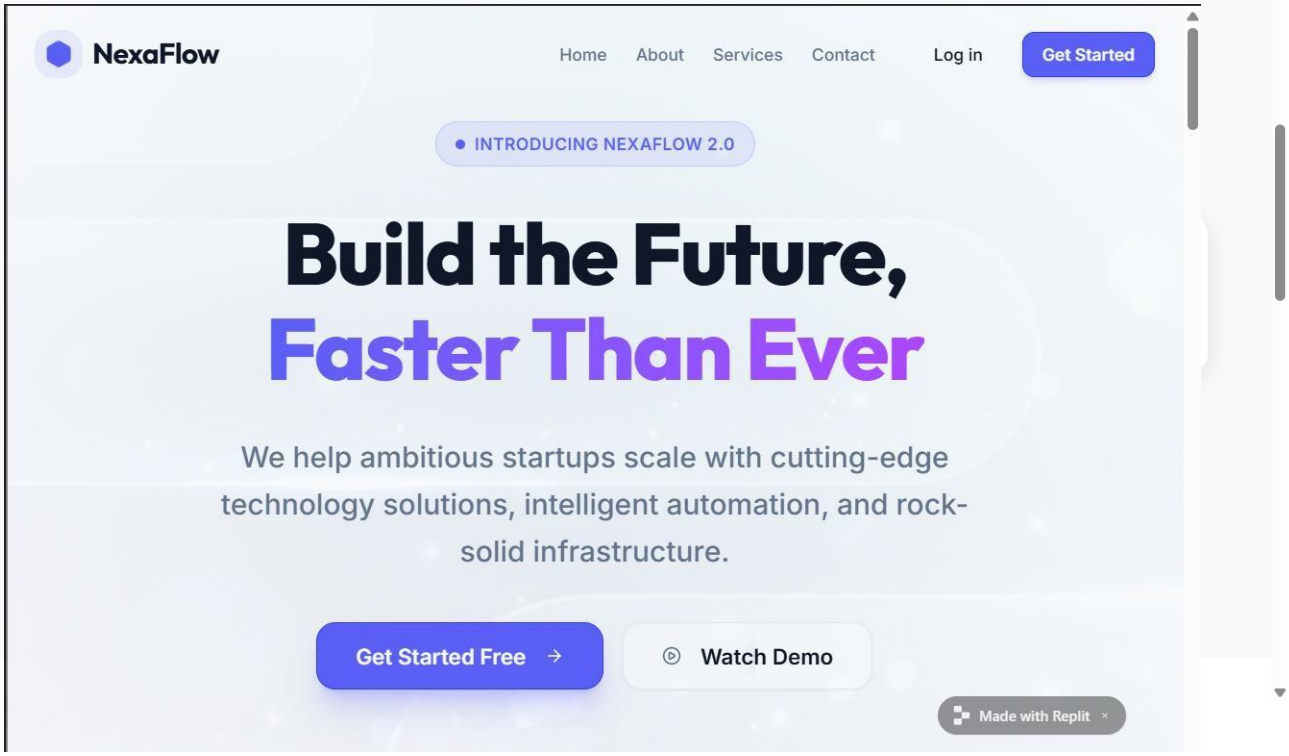
Task 2: Interactive Call-to-Action Button

Scenario:A marketing page requires a call-to-action button that responds when users interact with it.

Prompt:

Create a responsive startup homepage using HTML, CSS, and JavaScript (Task 1).
The page should include:
- A header with navigation links (Home, About, Services, Contact)
- A hero section
- A services section with 3 cards
- A footer with basic company information
Interlink Task 2 by adding a Call-to-Action button "Get Started" in the hero section.
When the button is clicked, JavaScript should display an alert or message without reloading the page.
Make the layout responsive using CSS media queries and include comments in the JavaScript explaining the logic.

Output:

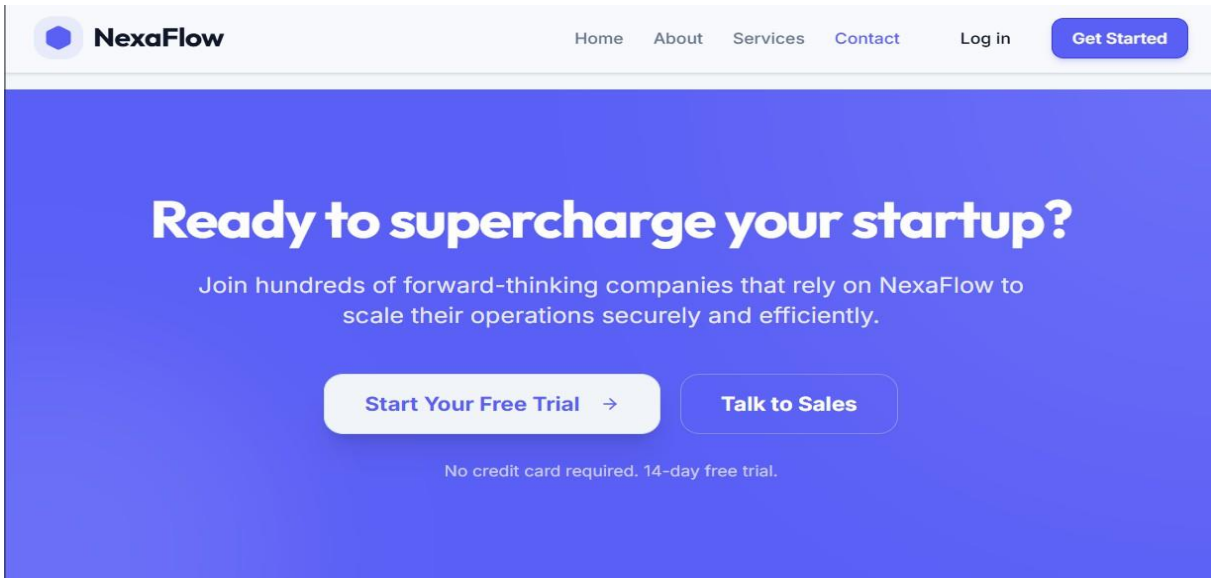


OUR PRODUCTS

Product List (3 items initially)

1. Cloud Starter Pack
2. AI Integration Suite
3. Security Shield Pro

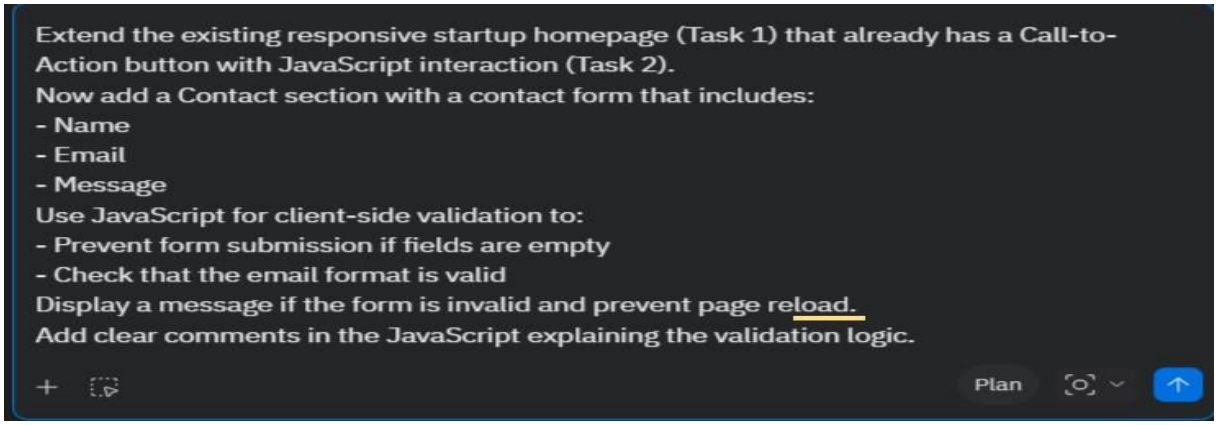
Add Item Remove Item



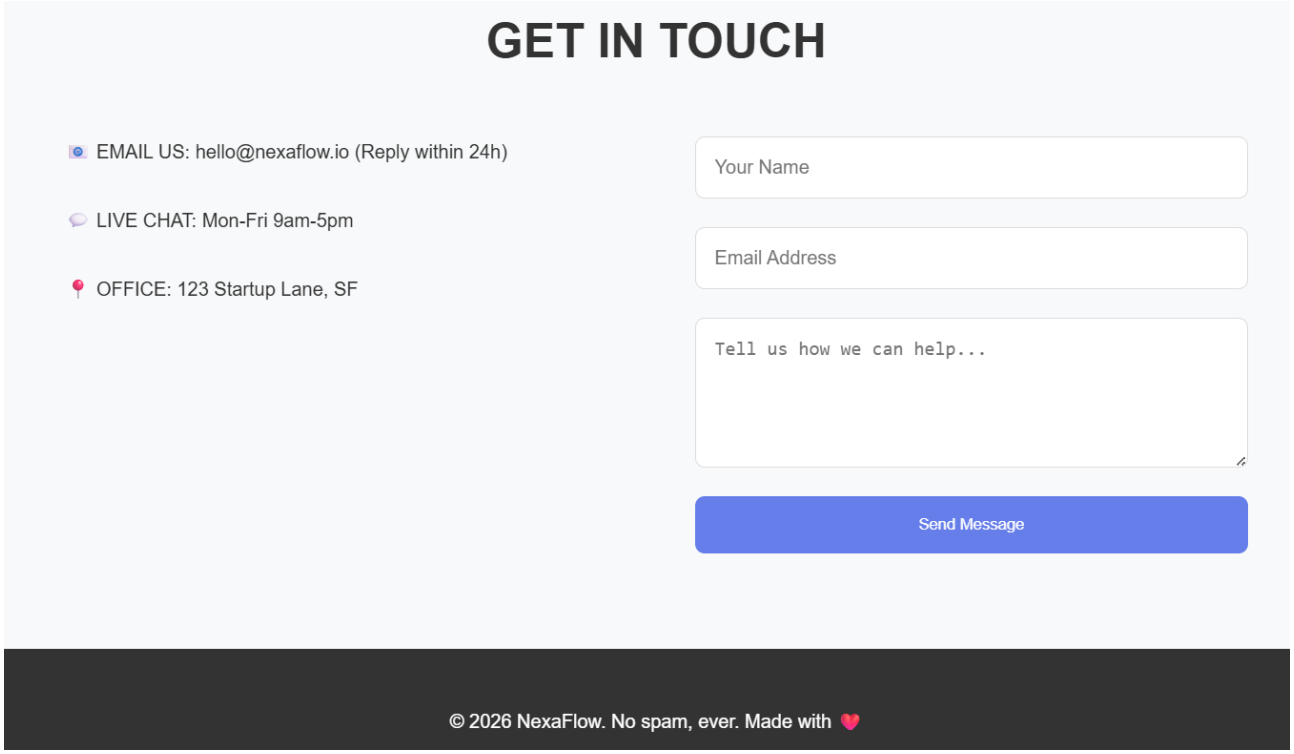
Task 3: Contact Form with Client-Side Validation

Scenario: You are developing a contact form for a company website to collect user queries safely and correctly.

Prompt:



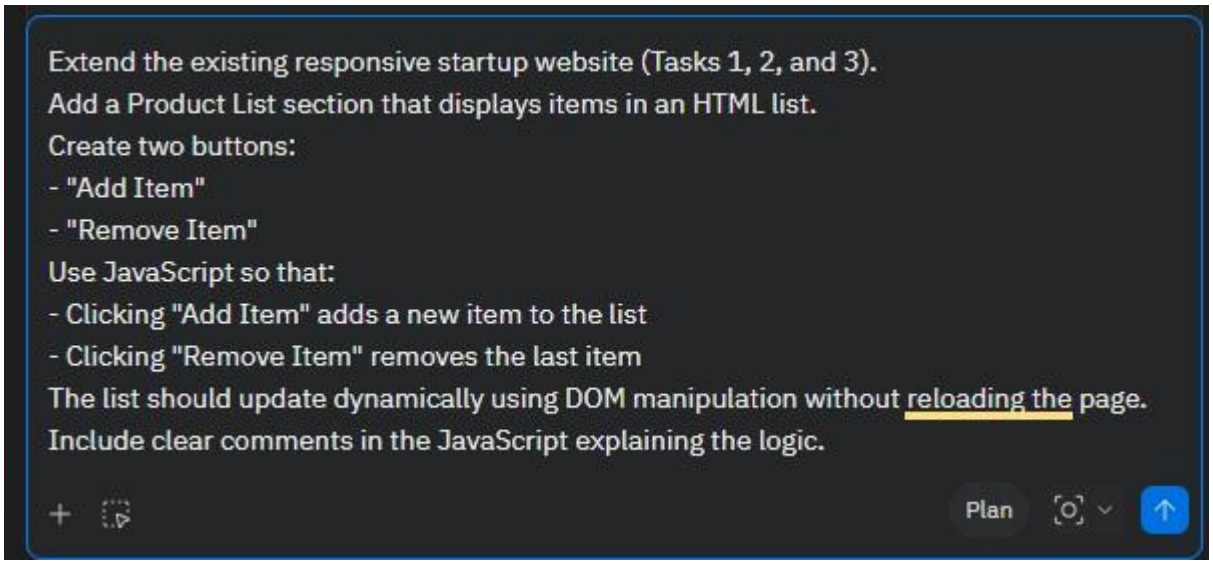
Output:



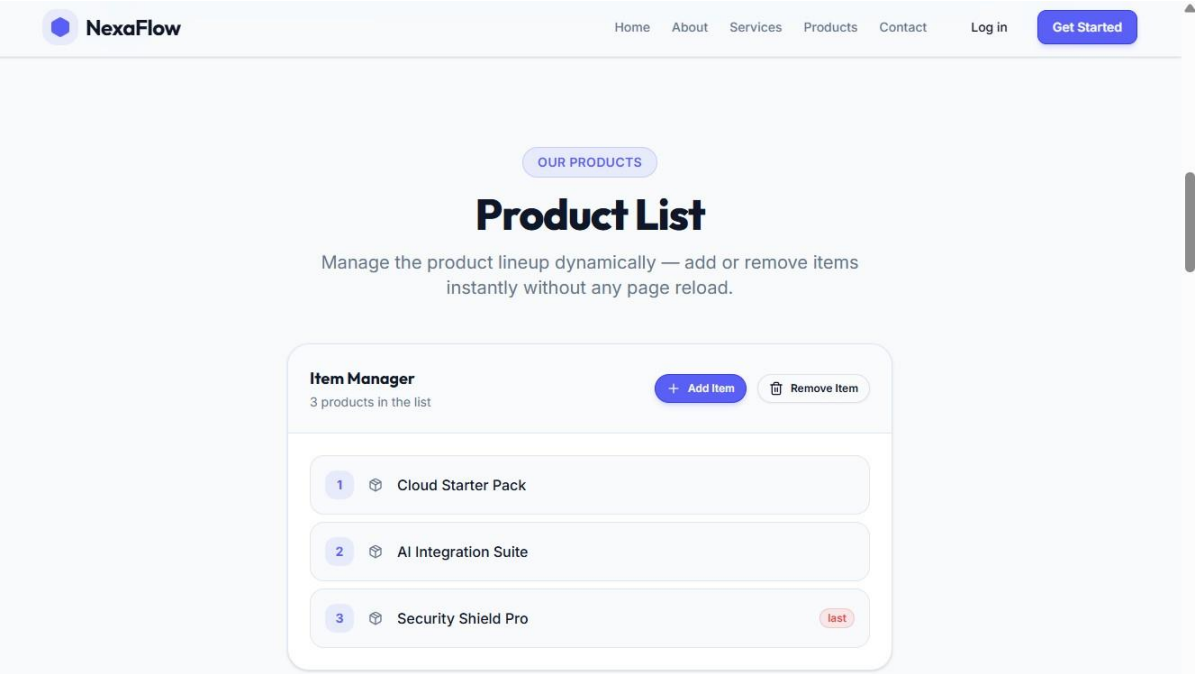
Task 4: Dynamic List Management for a Product Page

Scenario: A product listing page needs to add or remove items dynamically without refreshing the page.

Prompt:



Output:



Task 5: Modal Popup for User Notifications

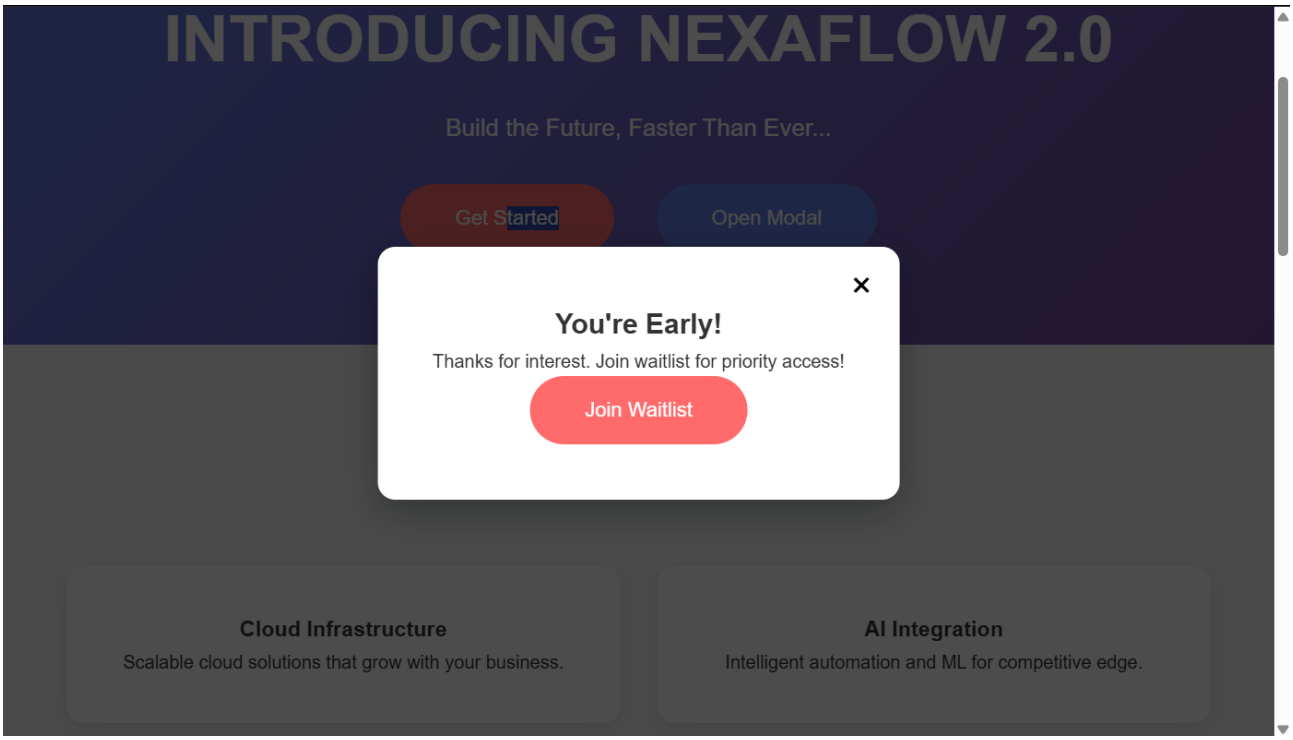
Scenario:You are building a user notification popup for announcements or alerts on a website.

Prompt:

Extend the existing responsive startup website created in Tasks 1–4.
Add a user notification modal popup.
Requirements:

- Create an "Open Modal" button on the page.
- When clicked, a modal popup should appear in the center with a semi-transparent background overlay.
- The modal should include a message and a "Close" button.
  Use CSS to style the modal and overlay clearly.
  Use JavaScript to:
- Open the modal when the button is clicked
- Close the modal when the close button or overlay background is clicked
  The modal should appear smoothly and close without reloading the page.
  Include clear comments in the JavaScript explaining the logic.

Output:



INTRODUCING NEXAFLOW 2.0
Build the Future, Faster Than Ever...
